Abstract. This paper attempts to develop game theoretical models of parents' decision-making on the consumption of private tutoring (PT). From the individual decision maker's perspective, investment in PT guarantees a high private rate of return, while from the country's viewpoint, PT entails a low social rate of return with substantial ...

Abstract. The current study examines hacktivism (i.e., hacking to convey a moral, ethical, or social justice message) through a general game theoretic framework - that is, as a product of costs and benefits. Given the inherent risk of carrying out a hacktivist attack (e.g., legal action, imprisonment), it would be rational for the user to weigh these risks against perceived benefits of carrying out the attack.
