This book highlights the important need for more efficient and environmentally sound combustion technologies that utilise renewable fuels to be continuously developed and adopted. The central theme here is two-fold: internal combustion engines and fuel solutions for combustion systems. Internal combustion engines remain as the main propulsion system used for ground transportation, and the ...

Advances in Internal Combustion Engines and Fuel ...

This chapter covers the features of internal combustion engines burning natural gas directly injected into the cylinder near TDC. Different approaches to building an engine of this kind are briefed, followed by determination of the engine compression ratio, requirements of the engine fuelling systems, for either compressed natural gas or liquefied natural gas, and selection of ignition methods.

This allows for higher compression ratios without "knock," and leaner air/fuel mixtures than in conventional internal combustion engines. As the fuel is ignited and burned, the surrounding air provides almost complete combustion before the exhaust port opens which further burns the lean mixture. Stratified charge engines 63. 97 64. 98
