Food retailers can apply advanced planning to practically all activities along the value chain (Exhibit 1), with a focus on improved demand forecasting, which allows better planning of store processes or a sustained increase in the quality and shelf life of fresh produce: Better demand forecasting.

Food retail: The path to autonomous planning | McKinsey

Food systems planning is concerned with improving a community's food system. A food system is generally understood to be the chain of activities connecting food production, processing, distribution, consumption, and waste management. Food is a necessity; along with air, water, and shelter, it is a basic essential for life.
