Karl Popper: Philosophy of Science. Karl Popper (1902-1994) was one of the most influential philosophers of science of the 20th century. He made significant contributions to debates concerning general scientific methodology and theory choice, the demarcation of science from non-science, the nature of probability and quantum mechanics, and the methodology of the social sciences.

### Popper, Karl: Philosophy of Science | Internet Encyclopedia of Philosophy

- Scientific knowledge is durable and robust but open to change. - Because science is based on empirical evidence scientists strive for objectivity. - But as it is a human endeavor, the processes, methods, and knowledge of science include subjectivity, as well as creativity and discovery. 41. Main Characteristics of Scientific Knowledge ...
