See how smoothly the curve changes when you play with the fractions in this animation, this shows you that this idea of fractional exponents fits together nicely: Things to try: Start with $m=1$ and $n=1$, then slowly increase n so that you can see $1/2$, $1/3$ and $1/4$; Then try $m=2$

If the exponent is negative, such as 4^{-2} , the number and exponent may be dropped under the number 1 in a fraction to remove the negative sign. Simplify the following by first removing the negative signs and then removing the exponents. 4^{-2} . 5^{-3} . 2^{-4} . 3^{-1} . Two specific types of powers should be noted: squares and cubes. To square ...
