To solve an equation that contains like terms, first combine the like terms. 2 m 3 m 35 25 Check: Substitute into the original. m 10 Combine like terms. 2 3 35 25

LESSON Practice B Solving Multi-Step Equations

The main goal in solving multi-step equations, just like in one-step and two-step equations, is to isolate the unknown variable on one side of the equation while keeping the constant or number on the opposite side. However, there is no rule on where to keep the variable. It all depends on your preference.

Multi-step equations require you to solve them in several steps. The steps could involve addition, subtraction, multiplication, or division. The steps could also involve setting up the equation. In a multi-step equation, you need to define your variable and the relationship of the variable to the rest of the equation. Activity
